WINDOWS AZURE CASE STUDY

"Windows Azure helps us rapidly provide customers fully instrumented, scalable SaaS solutions with complete commercial and operations management capabilities for their .NET applications we SaaS-enable with SurPaaS." – Scott Chate, VP, Corent Technology

SITUATION:

Software vendors are seeking rapid transformation of their web applications to robust, scalable software-as-a-service (SaaS) solutions. They require a reliable cloud platform with a rich set of services and a solid market presence for their SaaS solutions, so that they can easily scale up as their business grows. They also require a set of SaaS-specific services to operate and manage the SaaS business.

SOLUTION:

Corent works seamlessly with Windows Azure's proven cloud platform of compute, storage, and network services to rapidly transform software to a SaaS solution. SurPaaS uses Windows Azure's API to provide timely, dynamic tenant provisioning and application scalability, with complete SaaS tenancy, operations, and commercial management.

BENEFITS:

- Windows Azure services and support enable a SaaS business to reliably scale, with SurPaaS providing the "as-a-service" capabilities for SaaS.
- SurPaaS utilizes Windows Azure's API capabilities for dynamic tenant provisioning, configuration, and scalability for any tenancy model.

SaaS with SurPaaS and Windows Azure
