

Transform Any VMware Environment — Your Way, with MaaS

From Discovery & Assessment to Migration & Modernization

In today's dynamic cloud and IT landscape, organizations must evolve rapidly while maintaining control over their existing VMware workloads. Whether you want to migrate from VMware to cloud-native, modernize your VMware infrastructure, or re-platform to a new hypervisor — **MaaS empowers you to do it all.**

Fast, Scalable, Future-Ready

Scan and assess over 1,000 VMware servers in just 6 hours

Migrate 1,000+ VMware servers in 8–10 weeks

Key Capabilities with MaaS

01

Discovery & Assessment

Comprehensive workload visibility including applications, dependencies, OS, network profiles, and software inventories.

02

Cloud Readiness & Modernization Insights

Identify cloud-fit workloads, modernization candidates, and re-platforming opportunities with clear recommendations.

03

Rightsizing & Cost Optimization

Optimize performance and reduce spend with automated capacity planning, rightsizing, and intelligent recommendations

04

Move Grouping & Migration Planning

Organize and plan phased migrations by application, environment, or impact, with full control over move groups and waves.

05

Flexible VMware Migrations

Seamless support for migrations from:

- VMware to VMware (on-prem or cloud)
- VMware to Azure, AWS, or GCP
- VMware to Hyper-V or other hypervisors
- VMware to containers and Kubernetes environments

Why Choose MaaS for VMware Migration and Modernization

Automation Built for VMware

No-code, wizard-driven processes to accelerate every stage, from scan to cutover.

Deep VMware Awareness

Tightly integrated with vCenter and VMware tools. Handles snapshots, EoL detection, and nuanced configuration scenarios.

Secure, Low-Risk Migration

Live sync, rollback-safe execution, and minimal downtime ensure safe transitions.

End-to-End Visibility

Dashboards, tracking, and real-time alerts give teams full control and governance across the project lifecycle.

Which VMware migration path best fits your cloud goals?

VMware Cloud/On-prem

Offers scalability and flexibility for cloud-based operations.

Cloud VM

Provides cost-effective virtual machine solutions in the cloud.

Hyper-V On-prem

Enables integration with Microsoft ecosystems and services.

Kubernetes

Supports modern containerization and orchestration needs.

Private Cloud

Leverages Azure local resources for hybrid cloud solutions.

Migrate your on-premises VMware environment to your preferred Target using MaaS

Ready to Redefine Your VMware Strategy?

Optimize your VMware landscape – migrate, modernize, and future-proof your infrastructure with MaaS.
